## PROFESSIONAL SUMMARY

Computer Science graduate and Information Security intern at Times Internet, working on CDN, WAF, DNS, and zero-trust application access (Akamai EAA) operations. Builds Python and Linux automation and API-driven reporting that makes infrastructure changes safer and faster: application and connector migrations with staged testing, verification, and rollback backups; DNS and certificate inventory automation; and access reviews. Strong foundation in networking (DNS, TCP/IP, HTTP/HTTPS, SSL/TLS), Linux, REST APIs, SQL, and Java/Spring Boot. Seeking a Cloud, Network Automation, or Infrastructure Security role.

## TECHNICAL SKILLS

**Infrastructure & Security:** Akamai CDN, Control Center and EAA, WAF, domain/DNS platforms (Constellix, OpenSRS, GoDaddy, Namecheap), AWS (domain reporting), DNS (CNAME/A records, dig, NXDOMAIN triage), SSL/TLS certificate inventory, IAM/access reviews, Cloud Security (Cisco certified)

**Operations & Automation:** Python, Bash, cron, systemd, REST APIs, pandas, retry/backoff and resumable jobs, scheduled refresh pipelines, multithreading

**Systems & Networking:** Linux (Ubuntu), SSH, process management, Windows, TCP/IP, HTTP/HTTPS, IP addressing

**Databases & Programming:** SQL, MySQL, SQLite, Java, Spring Boot, JavaScript, C++

**Practices & Tools:** Change management, rollback planning, troubleshooting and root-cause analysis, process documentation, data validation, Git, GitHub, Postman, VS Code, Excel reporting

## PROFESSIONAL EXPERIENCE

**Information Security Intern — CDN & WAF Team**

*Times Internet Limited, Noida (Cloud Engineering, Aug 2026; Information Security, Sep 2026 onward)* *Aug 2026 – Nov 2026 (Expected)*

- Led the migration of 200+ Akamai EAA applications between data-center regions by attaching replacement connectors, redeploying each app, and running a mapping-by-mapping verification; delivered the final report to my senior with all mappings passing.
- Resolved a connector-removal failure (update API returned HTTP 200 but old connectors stayed attached) by validating a CLI-based detach on a staging app first; traced 2 of 8 failed verification mappings to a missed attach after an HTTP 403 and re-ran checks until all passed.
- Changed connectors on 8 tunnel applications across both regions using a pilot-first rollout with saved backups for rollback, then fixed a post-change deployment issue and sync-verification alerts by redeploying and re-validating.
- Pull properties, origins, certificate, and user data from Akamai Control Center via APIs to feed reports and the dashboard.
- Compile domain reports from five registrar and DNS platforms (OpenSRS, Namecheap, GoDaddy, Constellix, AWS) for inventory visibility.
- Automated DNS/CNAME resolution for 3,172+ SAN domains using Python, classifying each into 5 DNS states and validating results against Linux dig.
- Stabilized a fragile legacy extraction job across 1,510 properties with retry/backoff, checkpointing, and resumable execution (zero failures), and parallelized a mapping script ~30-40x faster across 1,873 properties (64,399 rows).
- Built a multi-source Business Unit mapping pipeline reconciling inventory, cost, and live API data to 82% verified coverage (2,598/3,172 rows).
- Audited Akamai IAM data (1,001 rows) down to 185 unique accounts, flagging accounts without 2FA or locked for security cleanup, and fixed silent data-quality bugs in legacy scripts, verifying each fix against live API and DNS results.

**Java Full Stack Development Trainee** — *KodNest Technologies, Bangalore* *2025*

- Completed hands-on training in Core Java, SQL, Spring Boot, REST APIs, Git, and debugging, including database integration and API testing.

## PROJECTS

**Akamai Operations Dashboard** | *Python, Flask, SQLite, Akamai API, JavaScript, systemd, cron (Internship Project)*

- Built a full-stack internal dashboard mirroring Akamai Control Center, consolidating 8+ live sections (Properties, Origins, Certificates, Users, DNS Check) and 64,399+ origin rows into one browsable source of truth.
- Scheduled fetcher scripts via cron, ran the app as a systemd service, tracked refresh status in a log table, and wrote a setup and operations guide plus a self-documenting scripts catalog.

**Online Test Management System** | *Java, Spring Boot, Spring Security, MySQL — secure exam platform with role-based access, BCrypt hashing, and REST APIs*

## EDUCATION

**Lakshmi Narain College of Technology Excellence (LNCTE), Bhopal** *Aug 2021 – Jun 2025*

B.Tech in Computer Science & Engineering | CGPA: 7.58

## CERTIFICATIONS

- Cisco Networking Academy – Cloud Security, Cybersecurity Essentials, Introduction to Cybersecurity | Basic MongoDB Certified
- KodNest Certified – Java Full Stack | Infosys SpringBoard – Java | HackerRank – SQL & Problem Solving (Intermediate)
